Parking lot USB exercise

Contents	Within this USB device are Jorge's job resume, and a new hire letter in google docs as well as shift schedule in googlesheet. Vacation ideas and employee budget tracker googledocs. There's also a wedding list. These files are sensitive work files in addition to PII. Personal files and work files should not be stored together.
Attacker mindset	Threat actors can use his vacation ideas document to raid his house while he's on vacation and while he's at work knowing his work schedule. They may also use his resume to impersonate him or act as a previous employer for phishing attempts. The wedding list can be used as leads for more cyber attacks impersonating Jorge.
Risk analysis	Mandatory employee modules about the awareness of USB attacks. Installing antivirus apps to routinely scan USB/all devices or disabling autoplay from PCs to prevent automatic execution of malware from the USB device.
